

STANDARDIZED FORM AAM

Post Procedural Care

EYELINER

Expect light to moderate swelling and redness. Tea bags or ice packs may be used to minimize swelling the day of and the day after the procedure. Use A&D Ointment or Vaseline around the treated area for 2-3 days following the procedure. You must use NEW mascara to avoid contamination.

EYEBROWS

Expect slight swelling, thickness and/or redness for 1-2 days following the procedure. Keep lightly glossed with A&D Ointment or Vaseline for 3-4 days. Wash with water and pat dry.

LIPLINER / LIPCOLOR

Expect moderate swelling, usually 1 - 2 days following the procedure. Applying ice for the first 2 hours is most important and continue throughout the day. Keep moist with A&D Ointment, Vaseline or Liprotek for the next 5-7 days, then switch to chap stick or lipstick with an SPF of 15 or greater, as the sun tends to fade lip color quickly. After the procedure, the lips may appear to have too much color. You may add make-up to soften the color. After 3 to 4 days, the color will become lighter as the epidermis sloughs off. It will appear that you have lost all your color; however, when your lips have healed completely, the dermal layer will gradually become darker. Two or 3 applications may be required to achieve the desired results. It is not uncommon to lose up to 70% of the color on the first application.

SCAR CAMOUFLAGE / AREOLA RESTORATION

Keep area away from water for 24 hours. Keep moist with A&D Ointment or Xeroform for 3-5 days. No vigorous exercise for 24 hours.

Remember:

- Do not use any Retin-A or Glycolic Acids while healing!
- Do not use Peroxide or Neosporin on ANY areas!
- Do not scrub or pick treated areas!
- Do not expose area to sun or tanning beds!
- Avoid facials, swimming and/or whirlpools for at least 5 days!
- Do not dye or tweeze eyebrows one week before and after procedure!

FAILURE TO FOLLOW POST-PROCEDURE INSTRUCTIONS MAY RESULT IN LOSS OR DISCOLORATION OF PIGMENT.

THE KNOWN POSSIBLE COMPLICATIONS FORM MICROPIGMENTATION ARE: REDNESS; SWELLING; PUFFINESS; BRUISING; DRY PATCHES; TENDERNESS; IT IS NORMAL TO LOSE APPROXIMATELY 1/3 OF THE COLOR DURING THE HEALING PROCESS. AFTER INITIAL PROCEDURE, THE COLOR MAY BE A SHADE TOO DARK; IN SIX DAYS IT WILL APPEAR TOO LIGHT. AFTER 10 DAYS, THE COLOR WILL SHOW MORE. IT WILL APPEAR SOFTER WHEN COMPLETELY HEALED BECAUSE THE COLOR WILL COME FROM THE DERMAL LAYER OF THE SKIN TO THE EPIDERMAL LAYER OF THE SKIN.

PLEASE DO NOT HESITATE TO CALL IF YOU HAVE ANY QUESTIONS.
